

Ola HAWAII
Team-Science Pilot Projects Program
2019 Call for Abstracts
NIH/NIMHD U54MD007601

PURPOSE: *Ola* means “health” and “to heal” in Hawaiian. Achieving health and wellness for communities in Hawaii, which suffer disproportionately from genetic, environmental and socio-economic disparities in health and healthcare access, is the rationale for the newly funded Research Centers in Minority Institutions (RCMI) Specialized Center. The strategic goal of the Center, named Ola HAWAII (Health And Wellness Achieved by Impacting Inequalities), is to grow and support a community of health disparities scholars (the “workforce”) to harness the power of diverse thought (the “think152 Td [(S)2(p(“)5(t)A2n2(hol)3(a)11(r)-11TJ -(t)-7(h di)3er)-6(nes)-

ncouraged to
on.

Key Dates:

INFORMATIVE WEBINAR: October 8, 2018 10am – 11am via Zoom ((Join from PC, Mac, Linux, iOS or Android: <https://zoom.us/j/762845669>)

ABSTRACT DUE DATE: November 5, 2018

INVITATION TO SUBMIT FULL PROPOSAL: November 15, 2018

RESEARCH SCOPE: Proposals that focus on the science of health disparities among Native Hawaiians, Pacific islanders, Filipino, and/or other populations in Hawaii will be considered highly responsive to this call for abstracts. In addition, abstracts which involve basic, clinical and/or biobehavioral methods and leverage robust transdisciplinary partnerships and linkages between basic science, clinical and behavioral medicine and/or community engagement, leading to adoption of best practices, are highly encouraged. Ola HAWAII is indeed open to the full spectrum of life science research. That is, proposals involving fundamental research seeking new knowledge about basic molecular mechanisms, using newly developed tools or repurposing existing tools, will also be given full consideration.

APPLICATION REQUIREMENTS

Eligibility: Any *faculty member* of the University of Hawaii System holding a doctoral degree (e.g., M.D., Ph.D., Pharm.D., Dr.P.H., D.S.W., Ed.D., Sc.D., etc.) and possessing the skills, knowledge and resources necessary to carry out the proposed research, is invited to submit an abstract, provided they are not excluded by the ineligibility criteria described below. A faculty member may submit only one abstract, as Principal Investigator. New investigators (i.e. have not been a PI/PD of an NIH independent research award) and early-stage investigators (within 10 years of terminal degree or end of post graduate clinical training), associate professors who have not had pilot funds during the last three years, and individuals from under-represented racial and ethnic groups and marginalized groups, such as sexual and gender minorities, as well as individuals with disabilities are encouraged to apply.

Priority for funding will be given to: new and early-stage investigators (particularly those who have never received any prior JABSOM pilot funds).

- Underrepresented minority investigators focusing on behavioral, clinical and/or basic science studies addressing health disparities related research.
- Investigators conducting community-engaged research among Native Hawaiians, other Pacific Islanders and Filipinos

Multiple Principal Investigator collaborations are also encouraged.

Ineligibility: Individuals who currently serve as the principal investigator of an active NIH R01, R35, R37, R56, P01, P20, P30, P50, P60, U01, U19, U54, DP1, DP2 (or similar) and/or K99/R00 grants **are ineligible** to apply. Similarly, those with R01-equivalent awards from the National Science Foundation, Department of Defense

and national societies and foundations, such as the American Heart Association, **are ineligible**, as are graduate students and full professors. Also ineligible are individuals who have received JABSOM pilot funding within the past three years. However, these individuals may serve as a co-investigator (but not multiple PI), or as mentor for the applicant.

Collaborator(s): All applicants must designate at least one collaborator, co-investigator or other principal investigator(s). Collaborators may be non-UH System faculty. The proposed research must involve a transdisciplinary team of investigators or collaborators comprising clinician scientists (e.g., physician, psychologist, social worker, nurse, etc.), basic scientists from disparate disciplines, and/or community partners. Additional collaborators may be included from the lay community.

Available Support: Applicants may request an annual budget with direct costs between \$25,000 - \$50,000/year for one year with no indirect costs. Applicants invited to submit a full application will need to submit a detailed budget and budget justification at that time. Leveraging funds from other grants or institutional funds to support the research project is to be encouraged.

Mentor(s): For applicants holding the academic rank of Assistant Professor or equivalent or lower rank, an additional requirement is the designation of one or more mid-level or senior-level ~~2021-11-13 (rev. 9-6-19) of 8-25~~
