

## Fall 2021

In this time of continued social distancing and hybrid or remote teaching for many, it can feel increasingly isolating to continue to work on research and scholarship, especially with the many distractions we continue to face. That said, the COVID-19 pandemic has created new opportunities for networking, learning and collaboration that were not possible before. Due to the normalizing of online meetings and familiarity with platforms such as Zoom, we are now able to access online cross-oceanic connections for scholarship and community. In this workshop, we discuss best practices for hosting successful research groups online and how to create thriving research communities even in this challenging context.

Environmental Social Science and Affiliate

**10 00** , **11 15** **28, 2021**

- Share best practices for starting an online research group
- Present specific techniques which work well for smaller research seminars
- Present specific techniques optimized for larger communities and listservs
- Discuss challenges of online research groups and creative solutions
- Share effective strategies for cross-cultural, interdisciplinary and multi-time-zone collaboration
